New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.

Disclosure; SEQ ID NO 61; 164pp; French

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (BGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of

N-PSDB; ADZ67066.

ö
           transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF. IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.

contraction of the transduction pathway of the signal mediated by the interaction of IGF1 or IGF2 with IGF1R and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly induces secondary effects connected with inhibition of the insulin receptor. The antibody is useful for preparation of a medicament intended connecter, preferably IGF-dependent, especially IGF1 and/or IGF2.

Condition of indivit the transformation of normal cells into cells with tumoral capacity. The armsformation of normal cells into cells with tumoral capacity of EGF-dependent and/or HERZ/neu-dependent cells. [1] is useful for preparation of a medicament intended to inhibit the growth and/or the proliferation of tumor cells, preferably IGF-dependent, especially IGF-dependent and/or IGF2-dependent and/or IGF2-dependent and/or IGF2-dependent and/or IGF2-dependent cells. [1] is useful in the preparation of a medicament intended for prevention or for the treatment of cancer, where the cancer is chosen from prostate cancer, osteosarcoma, lung cancer, breast cancer, endometrial cancer or colon cancer. [1] is useful in preparation of a medicament intended for the preparation of a medicament intended for the prevention or for the intended for the specific targeting of a biologically active compound to calls expressing or overexpressing of illnesses induced by an order in vitro diagnosis of illnesses induced by an order or an order of illnesses induced by an order or an order or and or an order or and order orde

Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-1R and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Bapecially they inhibit transformation of tumor cells, to so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-1R and/or EGFR. This sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoms; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder;

The invention relates to a novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of specifically inhibiting tyrosine kinase activity of the receptor, comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino acids (ADZ67006 and ADZ67014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal activation of the IGF-IR and/or EGFR, and/or connected with a signal mediated by the interaction of IGF1 or IGF2 with IGF-IR and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly induces secondary effects connected with inhibition of the insulin contractor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells into cells with tumoral consecuted to proper consecuted with inhibition of IGF2 and of consecuted with inhibition of the insulin contractor, preferably IGF-dependent and/or HER2/neu-dependent cells, preferably IGF-dependent, especially IGF1 and/or IGF2-dependent and/or EGF-dependent and/or E
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          medicament intended for prevention or for the treatment of cancer, where the cancer is chosen from prostate cancer, osteosarcoma, lung cancer, breast cancer, endometrial cancer or colon cancer. (1) is useful in the preparation of a medicament intended for the prevention or for the treatment of psoriasis. (1) is useful in preparation of a medicament intended for the specific targeting of a biologically active compound to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor, useful for treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Beck A;

                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or rereat diseases associated with oversapression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Bspecially they inhibit transformation of normal cells, so are useful against cancers of the
cells expressing or overexpressing the IGF-IR and/or EGFR receptor. (I) is useful for in vitro diagnosis of illnesses induced by an overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (I), which is optionally labeled. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                       79

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of
                  also for treating psoriagis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-1R and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor, useful for treating cancer.
                                                                                                                                                                                                                                                                                                                             9

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or creat diseases associated with hoverexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor EGFR) and/or with hoperactivity of signal transduction pathways mediated by interaction of hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of numor cells to tumor cells, inhibit growth and/or prostate, lung, breast, endometrium and colon, also osteosarcoma, and prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder; light chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9

receptor (IGF-IR) antibody (I) to its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of specifically inhibiting tyrosine kinase activity of the receptor, comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal cyleration of the IGF-IR and/or EGRF, and/or connected with a hyperactivation of the IGF-IR and/or Connected with a hyperactivation of the IGF-W and/or EGRF, and/or of EGF with EGRR, where interaction of IGF or IGF2 with IGF-IR and/or of EGF with EGRR, where the administration of the medicament does not induce or only slightly induces secondary effects connected with inhibition of the insulin receptor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells with tumoral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           character, preferably IGF-dependent, especially IGF1 and/or IGF2.

dependent and/or EGF-dependent, especially IGF1 and/or IGF2.

dependent and/or EGF-dependent and/or HER2/neu-dependent cells. (I) is useful for preparation of a medicament intended to inhibit the growth especially IGF2-dependent and/or EGF-dependent, especially IGF1-and/or IGF2-dependent and/or EGF-dependent and/or HER2/neu-dependent cells. (I) is useful in the preparation of a medicament intended for prevention or for the treatment of cancer, where the cancer, especially IGF2-dependent and/or EGF dependent and/or EGF2-dependent and/or EGF3-dependent and/or EGF3-de
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel isolated anti-insulin-like growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the biological sample winch (1), which is optionally labeled. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-and appecifically inhibiting tyrosine kinase activity of receptor, useful for treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Duflos A, Haeuw J, Beck A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 12; SEQ ID NO 67; 125pp; English.

This invention describes novel recognition molecules, especially antibodies that bind specifically to the Core-1 antigen. The recognition molecules are used to make constructs containing the framework regions that be separate, include and/or flank the specified sequences, especially where the framework regions are from the immunoglobulin [Ig] superfamily, protease inhibitors, lectins, helix-bundle proteins and/or lipocalins. Wost especially the framework regions are from antibodies, particularly the variable heavy chain (VH) and the variable light chain (VL) of human and/or murine origin. The constructs may also include a His or myc tag, is a single-chain antibody fragment, multibody, Fab fragment, fusion protein of an antibody fragment, with peptide or protein, and/or an Ig of types G, M, A, B or D and/or their subclasses. It may be human, humanised, murine or chimeric, e.g. IgM without the J chain. The additional sequences/structures in the constructs are Ig domains of various species, interacting or stabilising domains, signal sequences, fluctuated types, cytolytic agents, enzymes, immuno-modulators or effectors, MHC molecules, antigens, chelators for radioactive labels, liposomes, transmembrane domains, viruses and/or cells, specifically

                   acid encoding them, and related vectors and host cells, are useful for prevention (e.g. as vaccine), diagnosis, alleviation, treatment, monitoring and/or secondary treatment of tumours (specifically of breast, colon, stomach, pancreas, large/small intestine, ovary, cervix, lung, prostate, kidney and/or liver) and/or metastases (particularly to liver), specifically where these are positive for the Cl antigen. The products of the invention provide simple, reliable and efficient detection of tumours. They are specific for carcinoma and show almost no binding to

The present invention relates to a humanised form of the antibody 340 (a mouse monoclonal antibody which binds to epidermal growth factor (EGF) receptor and inhibits binding of EGF), obtainable from the cell line of deposited with the ECACC under accession number 97021428. The humanised form of the antibody 340 is useful in gene therapy, medicine and in the manufacture of a medicament for treatment or prophylaxis of cancer. The invention is useful for treating colorectal, lung, breast, gastric or ovarian cancers or also for preventing the recurrence of cancer after initial treatment or surgery. The invention is also useful for enhancing a protective immune response against cancer by optimised immunisation conceptor, as the original murine antibody and has increased ability to immunogenicity but shows similar binding to cells expressing EGF receptor, as the original murine antibody and has increased ability to inhibit the growth and apoptosis inhibitor. The present sequence is mouse monoclonal antibody alpha 340 deimmunised light chain variable (VK)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ô
                                                                                                New humanized form of mouse monoclonal antibody 340 which binds to epidermal growth factor receptor and inhibits binding of growth factor, useful for treating colorectal, lung, breast, gastric and ovarian cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
```

Variable light chain VL fragment Karoll SEQ ID NO 90.

```
The present invention relates to a humanised form of the antibody 340 (a mouse monoclonal antibody which binds to epidermal growth factor (EGF) receptor and inhibits binding of EGF), obtainable from the cell line deposited with the ECACC under accession number 97021428. The humanised form of the antibody 340 is useful in gene therapy, medicine and in the manufacture of a medicament for treatment or prophylaxis of cancer. The invention is useful for treating colorectal, lung, breast, gastric or ovarian cancers or also for preventing the recurrence of cancer after initial treatment or surgery. The invention is also useful for enhancing a protective immune response against cancer by optimised immunisation acchedules. The humanised form of the antibody 340 has reduced immunogenicity but shows similar binding to cells expressing EGF receptor, as the original murine antibody and has increased ability to implie the growth of EGF receptor expressing cells. The invention is used as cell growth and apoptosis inhibitor. The present sequence is mouse monoclonal antibody alpha 340 deimmunised light chain variable (VK)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New humanized form of mouse monoclonal antibody 340 which binds to epidermal growth factor receptor and inhibits binding of growth factor, useful for treating colorectal, lung, breast, gastric and ovarian cancer.

This invention describes novel recognition molecules, especially antibodies that bind specifically to the Core-1 antigen. The recognition molecules are used to make constructs containing the framework regions that separate, include and/or flank the specified sequences, especially the teamework regions are from the immunoglobulin (Ig) superfamily, compretes inhibitors, lectins, helix-bundle proteins and/or lipocalins. Most especially the framework regions are from antibodies, particularly the variable heavy chain (VH) and the variable light chain (VL) of humans and/or muxine origin. The constructs may also include a His or myc tag, a clysine-rich region and/or a multimerisation domain, most particularly it is a single-chain antibody fragment, multibody, Pab fragment, fusion crypes G, M, A, E or D and/or their subclasses. It may be human, thumanised, mutine or chimeric, e.g. IgM without the J chain. The contines in the constructs are Ig domains of additional sequences/structures in the constructs or Ig domains of additional sequences/structures in the constructs or Ig domains of specificities, interacting or stabilising domains, signal sequences, corrects, MT collytic agents, enzymes, immuno-modulators or effectors, MT collotic agents, enzymes, immuno-modulators or constructs containing them, nucleic contained them, and related vectors and host cells, specifically or prevention (e.g. as vaccine), diagnosis, alleviation, treatment. antibody; Core-1 antigen; framework region; immunoglobulin superfamily; protease inhibitor; lectin; helix-bundle protein; lipocalin; variable heavy chain; VH; variable light chain; VL; vaccine; diagnosis; alleviation; treatment; tumour; breast; colon; stomach; pancreas; large/small intestine; ovary; cervix; lung; prostate; kidney; liver; New recognition molecules, e.g. antibodies (and nucleic acids) that k specifically to Core-1 antigens, useful for diagnosis, treatment and prevention of tumors and metastases. ä Stahn Danielczyk A, Karsten U, Ravn P, (NEMO-) NEMOD BIOTHERAPEUTICS GMBH & CO KG Claim 15; SEQ ID NO 90; 136pp; German. 01-DEC-2003; 2003WO-DE003994. 29-NOV-2002; 2002DE-01056900. receptor and inhibits binding of EGF), obtainable from the cell line deposited with the ECACC under accession number 97021428. The humanised form of the antibody 340 is useful in gene therapy, medicine and in the manufacture of a medicament for treatment or prophylaxis of cancer. The invention is useful for treating colorectal, lung, breast, gastric or ovarian cancers or also for preventing the recurrence of cancer after initial treatment or surgery. The invention is also useful for enhancing contective immune response against cancer by optimised immunisation schedules. The humanised form of the antibody 340 has reduced immunogenicity but shows similar binding to cells expressing EGF receptor, as the original unwrine antibody and has increased ability to inhibit the growth of EGF receptor expressing cells. The invention is used as cell growth and apoptosis inhibitor. The present sequence is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to novel humanised antibodies and antibody fragments which react with fibroblast growth factor 8 (FGF8) and inhibit its biological functions. The polypeptides of the invention have cytostatic activity. The antibody is useful for the treatment of cancer, including prostate, breast, ovarian and testicular cancer. The present sequence is used in the exemplification of the invention

                                                                                                 The invention comprises a method for treating and preventing arthritis, the method involves the use of anti-FGF-8 (sic fibroblast growth factor) antibody. The antibody and method of the invention is useful for: the detection, treatment and prevention of arthritis; as a cartilage protection agent; as a joint destruction inhibitor; and as a synoviral proliferation inhibitor. The present amino acid sequence represents a

US-11-089-266-66

Publication No. US20050287148A1

Sequence 66, Application No. US20050287148A1

GENERAL INFORMATION:

APPLICANT: Chatterjee, Malaya

APPLICANT: Chatterjee, Sunil K.

TITLE OF INVENTION: MONOCLONAL ANTIBODY 1A7 AND USE FOR THE

TITLE OF INVENTION: TREATMENT OF MELANOMA AND SMALL CELL CARCINOMA

NUMBER OF SEQUENCES: 66
                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 YGVPDRFSGSGSGTDFTLKISSVEAEDLGVYYCFQGSHVPWTFGGGTKLEIK 112

Sequence 66, Application US/10512184
Publication No. US20050244901A1
GENERAL INFORMATION:
APPLICANT: Fraunhofer Gesellschaft zur F"rderung der angewandten Forschung e.V.
TITLE OF INVENTION: Antibodies, recombinant antibodies, recombinant
TITLE OF INVENTION: antibody fragments and fusions mediated plant disease
TITLE OF INVENTION: resistance against fungi
TITLE OF INVENTION: resistance against fungi
FILE REFERENCE: 3881.014501
CURRENT APPLICATION NUMBER: US/10/512,184
CURRENT FILING DATE: 2004-10-22
NUMBER OF SEQ ID NOS: 72
SOFTWARE: PatentIn Ver. 2.1
SEQ ID NO 66
LENGTH: 569
TYPE: PRT
ORGANISM: Artificial Sequence

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                               590

Patent No. 6509016

GENERAL INFORMATION:

APPLICANT: Chatterjee, Malaya
APPLICANT: Chatterjee, Malaya
APPLICANT: Chatterjee, Sunil K.

TITLE OF INVENTION: MONOCLONAL ANTIBODY 1A7 AND USE FOR THE
TITLE OF INVENTION: TREATMENT OF MELANOWA AND SMALL CELL CARCINOWA
NUMBER OF SEQUENCES: 66
CORRESPONDENCE ADDRESS:
ADDRESSEE: MORRISON & FOERSTER
STREET: 755 PAGE MILL ROAD
CITY: PALO ALTO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

JOS-152-844-2

JOS-152-844-2

Patent No. 5935821

GENERAL INPORMATION:

APPLICANT: Chatterjee, Malaya

APPLICANTON: TREATMENT OF MELANOWA AND USE FOR THE

TITLE OF INVENTION: MONOCIONAL AND SWALL CELL CARCINOMA

NUMBER OF SEQUENCES: 66

CORRESSONERCE ADDRESS:

ACOUNTY: PALO ALTO

STREET: 755 PAGE MILL ROAD

CONTYR: USA

STREET: ASA ASA ASTA AND

COMPUTER: IBM PC Compatible

COMPUTER: IBM PC Compatible

COMPUTER: IBM PC Compatible

COMPUTER: IBM PC Compatible

COMPUTER: PATENTIN RESTERM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.30

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/752,844
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                20 DVFMTQTPLSLPVSLGDQASISCRSSQSIVASNGNTYLEWYLQKPGQSPNLLIYFVSNRF

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 61,

88888888	The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and its franchicator receptor (EGFR) and/or with

            transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate. Jung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-1R and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; darmatological disease; immune disorder; immunoglobulin; light chain variable region.

Treeperor (IGF-IR) antibody (I) or its functional fragment, being capable of spable of binding to human IGF-IR and, if necessary, capable of specifically inhibiting trowner kinase activity of the receptor.

Comprishing a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino acids (AD267006 and AD267014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal activation of the IGF-IR and/or EGFR, and/or connected with an overexpression and/or an abnormal contractivation of the transduction pathway of the signal mediated by the interaction of the IGF-IR and/or EGFR, and/or connected with a medicament does not induce or only slightly interaction of the transformation of normal cells into cells with tumoral contractor. The antibody is useful for preparation of a medicament intended to inhibit the growth or induce secondary effects connected with inhibition of the insulin capacitary preferably IGF-dependent, especially IGF-dependent and/or EGF-dependent and/or HERZ/neu-dependent and/or EGF-dependent and/or HERZ/neu-dependent of a medicament intended for prevention or for the treatment of cancer, where the cancer is chosen from proparation of a medicament intended for prevention or for the treatment of amedicament intended for prevention or for the treatment of section of a medicament intended for prevention or for the treatment of postals in the preparation of a medicament intended for prevention or for the prevention or for the cancer, where the cancer, endometrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for the specific targeting of a biological septended by an overexpression or an underexpression of the IGF-IR and/or EGFR receptor. (I) is useful for in vitro diagnosis of illnesses induced by an overexpression or an underexpression of the IGF-IR and/or EGFR receptor. It is use

```
The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or retar diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Bapecially they inhibit transformation of normal cells, so are useful against cancers of the prostate, lung, breast, endomerrium and colon, also osteosarcoma, and also for treating psoriasis, Ab are a also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  protein sequence used to generate the Ab of the invention

Ä Beck Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) artibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor, useful for treating cancer. Example 8; SEQ ID NO 49; 125pp; English.

ö

The invention relates to a novel isolated anti-insulin-like growth factor.

Treceptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of specifically inhibiting tyrosine kinase activity of the receptor, comprising a light or heavy chain having at least one complementary comprising a light or heavy chain having at least one complementary comprising a light or heavy chain having at least one complementary caids (ADZ67006 and ADZ67014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of a milneas connected with a noverexpression and/or an abnormal activation of the IGF-IR and/or EGFR, and/or of EGFR, and/or EGFR, and and/or EGFR, and/or EGFR, and and/or EGFR, an overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (1), which is optionally labeled. The present sequence is used in the exemplification of the invention.

The growth of all solid tumours requires new blood vessel growth, anglogenesis, inhibition of which is an approach to limiting tumour growth. The invention may allow development of therapeutics with a cytostatic activity as a collagen agonist or antagonist. The invention is useful for diagnosing and treating disorders associated with anglogenesis, tumour growth and/or cancer metastasis. The present sequence is the partial amino acid sequence of the mouse anticryptic collagen site antibody HII77 variable region light chain used during the creation of the antibody of the invention.

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or creat diseases associated with overexpression and/or abnormal activity of IGF-IR. Ab and its fragments are used to prevent or IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ô

The invention relates to a novel isolated anti-insulin-like growth factor I receptor (IGP-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of specifically inhibiting tyrosine kinase activity of the receptor. Comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino acids (ADZ67006 and ADZ67014). An autibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal activation of the IGP-IR and/or EGFR, and/or connected with a ctivation of the transduction pathway of the signal mediated by the interaction of IGFI or IGF2 with IGF-IR and/or of EGF with EGFR, where the administration of the medicament does not induces or only slightly induces secondary effects connected with inhibition of the insulin receptor. The antibody is useful for preparation of a medicament intended
                                                                                                                                                                                                                                                                                                                 Insulin-like growth factor 1 receptor; antibody; tumor; cytostatic; neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder; light chain variable region.
antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor, useful for treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated anti-insulin-like growth factor I receptor (IGF-IR)

cc to inhibit the transformation of normal cells into cells with tumoral character, preferably IGF-dependent, especially IGF1 and/or IGF2-
C dependent and/or EGF-dependent and/or HER2/new-dependent calls. (I) is useful for preparation of tumor cells, preferably IGF-dependent and/or the probliferation of tumor cells, preferably IGF-dependent, and/or LER2/new-dependent and/or EGF-dependent and/or HER2/new-dependent cells. (I) is useful in the preparation of a medicament intended for prevention or for the treatment of cancer, where the cancer is chosen from prostate cancer, osteosarcoma, lung cancer, the cancer is chosen from prostate cancer, osteosarcoma, lung cancer, or preparation of a medicament intended for the prevention or for the prevention of a medicament cancer or colon cancer. (I) is useful in preparation of a medicament cancer or colon cancer. (I) is useful in preparation of a medicament cancer or colon cancer. (I) is useful in preparation of a medicament cancer or colon cancer. (I) is useful for in vitro diagnosis of a biologically active compound to cells expression or an underexpression of the IGF-IR and/or EGFR receptor is useful for in vitro diagnosis of illnesses induced by an overexpression or an underexpression of the IGF-IR and/or EGFR receptor is usepected, which involves contacting the biological sample with (I), which is optionally labeled. The present contacting the cancer is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

The present invention relates to a humanised form of the antibody 340 (a mouse monoclonal antibody which binds to epidermal growth factor (EGF) receptor and inhibits binding of EGF), obtainable from the cell line deposited with the ECACC under accession number 97021428. The humanised form of the antibody 340 is useful in gene therapy, medicine and in the manufacture of a medicament for treatment or prophylaxis of cancer. The manufacture of a medicament for treatment or prophylaxis of cancer. The invention is useful for treating colorctal, lung, breast, gastric or ovarian cancers or also for preventing the recurrence of cancer after initial treatment or surgery. The invention is also useful for enhancing a protective immune response against cancer by optimised immunisation schedules. The humanised form of the antibody 340 has reduced immune is the original murine antibody and has increased ability to receptor, as the original murine antibody and has increased ability to receptor, as the original murine antibody and has increased ability to inhibit the growth of EGF receptor expressing cells. The invention is used as cell growth and apoptosis inhibitor. The present sequence is mouse monoclonal antibody alpha 340 light chain variable (VK) region
                                                                                                                                                                                               New humanized form of mouse monoclonal antibody 340 which binds to epidermal growth factor receptor and inhibits binding of growth factor, useful for treating colorectal, lung, breast, gastric and ovarian cancer.

This invention describes a novel method for treating a neoppiage comprises administering an anti-IL-13 antibody or its binding fragment that binds administering an anti-IL-13 antibody or its binding fragment that binds administering an anti-IL-13 antibody or its binding fragment that binds gpecifically and with high affinity to both glycosylated and nonglycosylated human IL-13 activity at an approximate molar ratio of 1:2 (MAD:IL-13). The method also describes 1) and neutralizes human IL-13 activity at an approximate molar ratio of 1:2 (MAD:IL-13). The method also describes 1) thumanized or chimeric antibody or binding fragment to a patient; 2) inhibiting IL-13 dependent proliferation of neoplastic cells in a mammal comprising administering the antibody or a binding fragment that inhibits the biological activity of IL-13 and 3) diagnosing a cancer or tumor overexpressing IL-13 comprising the use of the anti-IL-13 antibody conditions are patient suspected of having the cancer or tumor. The antibodies used in the method of the invention are 228B/C produced by the hybridoma designated PTA-5657, 228A-4 and produced by the hybridoma designated PTA-5657, 227-26 produced by the hybridoma designated PTA-5657, or 227-43 produced by the hybridoma designated PTA-5657, or 227-43 conduced by the antibody a single domain antibody or a humanized antibody a single domain antibody or a humanized combinations. The antibody further comprises a physiologically acceptable carrier, diluent, excipient, or stabilizer. The antibody mediates killing the antibody dependent cell-mediated cytotoxicity and vorcer a very partial patient of the patient cell-mediated cytotoxicity and vorcer and pendiates when a least a variable PTA-6000 antibody and produced by antibody and pendiate subtant and produced by antibody and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CDRIJ-FRIZ-CDRIZ-FRIJ-CDRIJ-FRL4. The antibody comprises at least a variable light or heavy chain region. The variable light or heavy chain region further comprises a constant region. The constant region is from an IgG antibody. The IgG antibody is an IgG1, IgG2, IgG3 or an IgG4 antibody. The antibody further comprises the heavy chain. The antibody is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Treating a neoplasm, e.g. Hodgkin's disease, that expresses and/or binds interleukin-13 (IL-13) comprises administering an anti-IL-13 antibody or its binding fragment that binds to both glycosylated and non-glycosylated
                                                                                                                                                                                                                  cytostatic; antibody therapy; neoplasm; interleukin 13; IL-13; cancer; diagnosis; tumor; humanized antibody; cell proliferation; Hodgkins disease; cytotoxin; chemotherapy; lymphoma; skin tumor; stomach tumor; colon tumor; breast tumor; pancreatic tumor; liver tumor; prostate tumor; lung tumor; head and neck tumor; renal tumor; liver tumor; squamcus cell carcinoma; brain tumor; Raposis carcinoma; solid tumor; monoclonal antibody; 227-26; 227-26-1; light chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           chain region comprising an amino acid sequence having the formula: FRL1-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel method for treating a neoplasm that
                                                                                                                                                                 Antibody 227-26/227-26.1 variable light chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 13; SEQ ID NO 7; 98pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel method for producing antibody enzymes comprising a structural analysis step which confirms the existence in the predicted stereostructure of the antibody based on its amino acid sequence of a catalytic tripler residue structure in which a serine residue, an aspartic acid residue, and a histidine or glutamic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 al antibody enzymes by identification of a catalytic n the stereostructure for production of antibody enzymes therapeutic agents for cancer and infectious diseases
associated with a cytotoxic agent, such as a radioisotope or a chemotherapeutic agent. The methods and antibodies are useful for treating neoplasms such as Hodgkin's lymphoma, skin cancer, stomach cancer, colon cancer, breast cancer, pancreatic cancer, liver cancer, prostate cancer, lung cancer, head-and-neck cancer, renal cell cancer, aguanque sell carrinoma, AIDS-associated Kaposi's carcinoma and brain cancer. This sequence represents the humanized mouse monoclonal antibody 227-26 and 227-26-1 variable light chain.

        by the method of the invention has virucide, anti-HIV, cytofratic, and antibacterial activity. The enzyme acts as a helicobacter pylori urease inhibitor, or chemokine receptor CCR-5 (HIV target) antagonist. The method of the invention is useful for the treatment, prevention and diagnosis of cancer and infectious diseases, especially infection by Helicobacter pylori or HIV. The present sequence is used in the exemplification of the invention.

Screening potential antibody enzymes by identification of a catalytic triplet residue in the stereostructure for production of antibody enzymes as diagnostic and therapeutic agents for cancer and infectious diseases including HIV infection.

WPI; 2004-132963/13.

N-PSDB; ADI26491

Uda T, Hifumi E;

Claim 39; SEQ ID NO 26; 232pp; Japanese.

The invention relates to a novel method for producing antibody enzymes comprising a structural analysis step which confirms the existence in the predicted stereostructure of the antibody based on its amino acid sequence of a catalytic triplet residue structure in which a serine residue, an aspartic acid residue, and a histidine or glutamic acid

The recognition molecules are used to make constructs containing the framework regions that separate, include and/or flank the specified sequences, especially where the framework regions are from the immunoglobulin (Ig) superfamily, protease inhibitors, lectins, helix-bundle proteins and/or lipocalins. Most especially the framework regions are from antibodies, particularly the variable heavy chain (WH) and the variable light chain (WL) of human and/or murine origin. The constructs may also include a His or myc tag, a
                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                        9

           by the method of the invention has virucide, anti-HIV, cycostatic, and antibacterial activity. The enzyme acts as a helicobacter pylori urease inhibitor, or chemokine receptor CRR-5 (HIV target) antagonist. The method of the invention is useful for the treatment, prevention and diagnosis of cancer and infectious diseases, especially infection by Helicobacter pylori or HIV. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antibody; Core-1 antigen; framework region; immunoglobulin superfamily; protease inhibitor; lectin; helix-bundle protein; lipocalin; variable heavy chain; VI; varcine; diagnosis; alleviation; treatment; tumour; breast; colon; stomach; pancreas; large/small intestine; ovary; cervix; lung; prostate; kidney; liver;

```
lysine-rich region and/or a multimerisation domain, most particularly it is a single-chain antibody fragment, multibody, Fab fragment, fusion protein of an antibody fragment with peptide or protein, and/or an ig of types G, M, A, E or D and/or their subclasses. It may be human, anditional sequences/structures in the constructs are ig domains of additional sequences/structures in the constructs are ig domains of various species, interacting or stabilising domains, signal sequences, interacting or stabilising domains, signal sequences, tluorescent dyes, toxins, antibodies with catalytic activity or other specificities, cytolytic agents, enzymes, immuno-modulators or effectors, MHC molecules, antigens, chelators for radioactive labels, liposomes, transmembrane domains, viruses and/or cells, specifically, cand encoding them, and related vectors and host cells, are useful for prevention (e,g. as vaccine), diagnosis, alleviation, treatment, concentry pancreas, large/small intestine, overy, cervix, lung, constate, kidney and/or liver) and/or metastases (particularly to liver), specifically where these are positive for the Cl antigen. The products of the invention provide simple, reliable and efficient detection of tumours. They are specific for carcinoma and show almost no binding to healthy tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 DVLAMIQIPLSLPVSLGDQASISCRSSQSIVHSNGNTYLQWYLQKPGQSPKLLIYKVSNRL 60

The antibodies of the invention are useful for treating and preventing the development of infections caused by the respiratory syncytial virus (RSV). The present sequence represents the chimeric IC2 kappa light chain carried by plasmid p533. IC2 is a murine monoclonal antibody known to bind to the RSV G glycoprotein. The above

A.Cross-references: UNIPROT.Q99M37; UNIPARC:UPI000017697F
A.Experimental source: strain BALB/c, cell line RP93 hybridoma cell
A.Note: the authors translated the codon CGG for residue 106 as Pro, ACC for residue 135
A.Note: the nucleotide sequence shown is inconsistent with authors' translation because ct except for four positions shown above
C.Comment: The protein is an anti-phosphorylcholine antibody.
C.Reywords: immunoglobulin V region; immunoglobulin homology
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           C,Accession: A27887

J. Clin. Invest. 52:1276-1281(1973)
-!- MISCELLANEOUS: The major amyloid protein appears to be identical
with the Bence Jones protein isolated from the same patient.
-!- MISCELLANEOUS: This protein was isolated from the urine of a
patient with plasma cell dyscrasia and amyloidosis.
-!- MISCELLANEOUS: The C region of this chain has the INV (1,2)

"Variable region sequence of the light chain from a Waldenstroms IgM
with specificity for phosphorylcholine.";
Biochemistry 15:3829-3833(1976).
-I- MISCELLANEOUS: This chain was isolated from a Waldenstrom's
macroglobulin that binds phosphorylcholine.
